Subject: RE: Tanjung Gateway — renewable energy threshold clarification needed

Raymond,

I have reviewed the project parameters you forwarded. This is not as straightforward as a simple Tier 1 classification. Let me set out the issue clearly.

You are correct that POL-UD-002 Section 2.1 places the project in Tier 1 based on value (\$9.8M < \$10M), which requires a 15% energy efficiency improvement over baseline. However, the renewable energy requirement is governed by a separate provision — Section 2.2 — which mandates that all commercial projects exceeding 5,000 sqm GFA must derive a minimum of 20% of annual energy from renewable sources. Tanjung Gateway has a GFA of 7,200 sqm and is a commercial development. Section 2.2 therefore applies independently of the Tier 1 classification.

This means the contractor's exception request is framed against the wrong baseline. They are requesting a reduction from 15% to 12%, but the applicable mandatory minimum is actually 20%, not 15%. The 15% figure relates to energy efficiency improvement, not renewable energy contribution — these are distinct requirements.

I should also flag that SOP-UD-002 Section 5.2 itself notes a tension between the Tier 1 energy pathway (15% improvement) and the commercial >5,000 sqm mandatory renewable energy minimum (20%). This is a known area of confusion and the SOP explicitly acknowledges it.

Please reassess the exception request in light of this. The contractor may need to be informed that the applicable threshold is higher than they — and we — initially assumed.

Dr Lim,

Thank you for raising this.

Could you confirm whether Section 2.2 applies here given the project is under \$10M?

Subject: Tanjung Gateway — renewable energy threshold clarification needed

Raymond,

The Sustainability Consultant for Tanjung Gateway (GreenPath Advisory) flagged in their May monthly report (Form MSR-20, dated 5 May 2026) that the renewable energy target recorded in the project's Sustainability Strategy Document appears to reference a 15% renewable energy contribution. They note that given the project's GFA of 7,200 sqm and its commercial classification, the mandatory minimum under POL-UD-002 Section 2.2 should be 20%.

I wanted to bring this to your attention as it may affect the exception request currently being processed. Could you check whether the correct threshold was applied when the exception was accepted for processing?

Siti Mariam

Deputy Director | Development Projects Division | HCSA
