Subject: RE: WAH permit - suspended access / rope access Tower B

Jennifer,

Checked the system. PTW-WAH-84 received. Issues noted:

1. Fall protection system: listed as 'standard harness' — no detail on anchor point certification or secondary lifeline.
2. Rescue plan: section marked 'TBC' — not completed.
3. Weather monitoring provision: no reference to wind speed protocols.
4. RA-55 risk assessment: attached but does not specifically address rope access hazards at height >10 floors.

The permit as submitted is incomplete. We cannot approve without the above being addressed.

Subject: FW: WAH permit - suspended access / rope access Tower B

Aaron,

Please review the permit request below. The work involves rope access from the roof of Tower B — these falls under the suspended access / rope access category.

The submission came in Saturday 12 April for a Wednesday 16 April start. That is just under 96 hours — which satisfies the 24-hour minimum. However, I want to confirm the submission is complete before we approve.

Can you check the system for the PTW-WAH-84 submission details and advise?

Subject: WAH permit - suspended access work this week

Hi Jennifer,

We are doing facade inspection and waterproofing repair on Tower B from this Wednesday (16 Apr 2025). The work is at 12–15 floors using rope access from the roof. We submit PTW 2 days ago (Saturday 12 Apr 2025) online.

Can you confirm it will be ready for Wednesday? The team is flying in from KL.

Linh Nguyen

Project Coordinator, Bintang Facade Solutions
